

IT-Locks

PC security

***Proximity Card Reader
for PC Security & Access Control
Enrolment Reader***

IT-Locks Features

- Administrator passwords
- User accounts
- Wireless smart card technology
- Enrolment Reader
- USB connection
- Virtual Keyboard Driver for 3rd party applications
- Privacy button
- Sleep & Eco energy saving modes
- CMAX-5 software Integration

Administrator logon screen in standalone IT-Locks software.

IT-Locks provides proximity card-based desktop security for PC's and laptops, either standalone or centrally managed with the CMAX-5 software.

Simply removing the card from the small desktop reader blocks the PC and monitor instantly from unauthorised users. Unlike Windows passwords, the proximity card cannot be copied or duplicated. IT-Locks leaves your data secure and can co-exist with Windows security or other third party software applications. Hard disk data remains unchanged.

IT-Locks instantly secures your keyboard, monitor and mouse and is ideal for open plan offices, training rooms, colleges and other locations. Using IT-Locks ensures that the computer is always locked and is not relying on users having to manually lock the PC.

The IT-Locks privacy button instantly blacks out the screen from prying eyes on confidential data and by pressing the button again reinstates the screen for immediate use. The compact desktop reader connects to the USB port on your PC, requiring no external power supply or other devices. Simply installing the easy to navigate software and IT-Locks is up and running.

IT-Locks instantly secures your computer when the proximity card is removed from the desktop reader.

Virtual Keyboard Driver

The desktop reader can also be used with any Windows™ application for automatic entry of card numbers.

In keyboard simulation mode the card number is displayed when the button is pressed. The setup software allows for hexadecimal and decimal display, card number length and position. This feature eliminates typing errors when entering long card numbers in databases or 3rd party software applications.

Energy Saving Features

When a valid proximity card is removed the PC can respond in a number of ways:

- PC & monitor blacked out
- Disable LAN
- Disable USB ports
- Sleep mode
- Eco Mode

The easy to use IT-Locks software manages up to 4096 cardholders. The Administrator(s) password(s) prevents unauthorised addition or deletion of cards.

The computer can be put into Sleep or Eco mode, this feature activates after a specified time delay — resulting in saving energy, costs and reducing carbon footprint.

CMAX-5 Software Integration

IT Locks software integrates direct with the CMAX-5 access control software allowing user access to be controlled from one central computer.

The user details are created and amended from one location. Using the CMAX-5 software allows all log on / log off transactions to be recorded.
